
Leveling Additives BLC701

1. Description:

BLC701 is a copolymer of methacrylate and butylacrylate, which is developed to correct imperfections in powder such as craters, pinholes, fisheyes, etc. It is very effective to eliminate or reduce such defects. However the detailed concentration for each specific system should be determined by laboratory test.

2. Technical data:

Appearance	White granules
Softening point	95~125°C
Volatile	≤1%

3. Application and dosage:

BLC701 is used in epoxy, polyester, hybrid and other powder coating systems. For best results it is recommended to pre-blend BLC701 with the other powder coating ingredients and then to homogenize the mixture in the extruder. The dosage of BLC701 is between 0.5~1.5% based on the total powder.

4. Packaging:

Packaged by multi-ply paper bags with polyethylene lining, net weight: 25kg/bag.

5. Storage and handling:

Keep in the cool and dry place, far away from fire.
